1 we had worked with Nartron once before on the aircraft
2 module, and we had successfully completed that with
3 them. So we knew they had the capability to do the
4 emissions, the radiant emissions work. The supplier
5 we had been working with, because of the time, the
6 short time required, dropped out of the program.

7 Q. May I interrupt you. Was that
8 Therm-O-Disc?

9 A. That was Therm-O-Disc.

10 Q. When would you place that in time?

11 A. That was in August, and I'm -- '97, I
12 think, is the date, from the discussion here. But in
13 August of that year Delphi called and said if we could
14 have production ready parts passing test in November,
15 we had the program. At that time I contacted
16 Therm-O-Disc, told them the requirements, they had
17 done a very good job up to that point, but they
18 absolutely refused to take on that time constraint.

19 Q. May I interrupt you? Was this a very much
20 time compressed program at that point?

21 A. Extremely.

22 Q. All right. And then --

23 A. Everything we had done to that point was
24 prototype build. It was to all the requirements, but
25 no tooling.
